

# MaternaCare-ES benchmark workflow

Evidence → factorial conditions → paired inference → evaluation

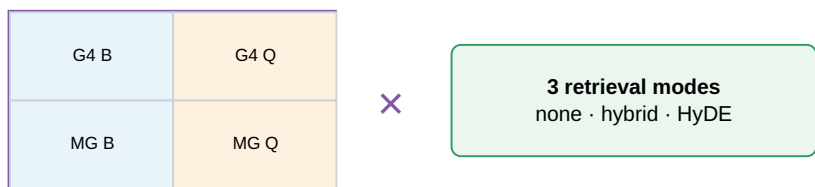

## 01 Data and evidence

Held-out questions remain paired with their sources

## 02 Factorial experiment

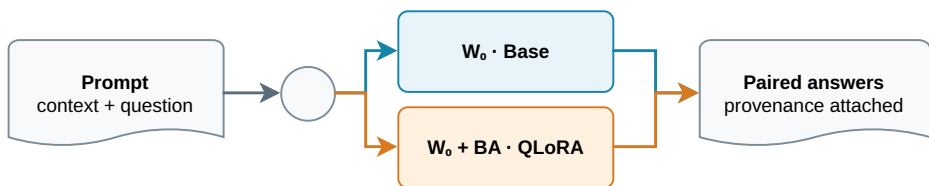

Each item traverses the same controlled grid

$$2 \times 2 \times 3 = 12 \text{ conditions}$$

## 03 Controlled generation

Identical prompts and deterministic decoding

## 04 Evaluation and aggregation

Four RAGAS metrics over 328 held-out items
